

IN THE CLAIMS

Please amend the claims as follows:

Claim 1 (Currently Amended): A language selecting method of selecting a language in which information is transmitted from a service providing apparatus to a mobile station in a mobile communication system that includes the mobile station and the service providing apparatus for providing services to the mobile station, which method comprises the steps of:

adding, by a control unit, language selection information for selecting a language which information is to be received to a transmission request signal;

transmitting, from the mobile station to the service providing apparatus, the request signal including the language selection select information for selecting a language in which information is to be received each time whenever the mobile station starts communication;

receiving, at the service providing apparatus, the language selection select information supplied from the mobile station; and

transmitting, from the service providing apparatus to the mobile station, information in the language corresponding to the language selection select information.

Claim 2 (Currently Amended): The language selecting method as claimed in claim 1, further comprising the steps of:

receiving, at the mobile station, a notification of which language is selected by a user; and

transmitting, from the mobile station to the service providing apparatus, language selection select information corresponding to the language selected by the user.

Claim 3 (Currently Amended): The language selecting method as claimed in claim 1, further comprising the step of[[,]]:

when a language in which user information is stored beforehand in the mobile station is selected by a user, transmitting language selection ~~select~~ information corresponding to the language selected by the user, from the mobile station to the service providing apparatus.

Claim 4 (Currently Amended): The language selecting method as claimed in claim 1, further comprising the step of
transmitting, from the mobile station to the service providing apparatus, language selection ~~select~~ information stored in advance.

Claim 5 (Currently Amended): The language selecting method as claimed in claim 1, further comprising the steps of:

determining, at the service providing apparatus, whether the information in the language corresponding to the language selection ~~select~~ information is transmittable; and
when the information is transmittable, transmitting the information in the language corresponding to the language selection ~~select~~ information, from the service providing apparatus to the mobile station.

Claim 6 (Currently Amended): A mobile communication system comprising a mobile station and a service providing apparatus for providing services to the mobile station, wherein, the mobile station comprises:

a control unit for adding, to a transmitted request signal, language selection information for selecting a language in which information is to be received;

a language information transmission unit for transmitting, each time whenever starting communication, the request signal including the language selection ~~select~~

information for selecting a language in which information is to be received, to the service providing apparatus, and

the service providing apparatus comprising ~~comprises~~ a language information receiving unit for receiving the language selection ~~select~~ information from the mobile station, and an information transmitting unit for transmitting information in the language corresponding to the received language selection ~~select~~ information, to the mobile station.

Claim 7 (Currently Amended): The mobile communication system as claimed in claim 6, wherein

the mobile station further comprises a language selection ~~select~~ receiving unit for receiving a notification of which language is selected by a user, and

the language information transmitting unit transmits language selection ~~select~~ information corresponding to the language selected by the user to the service providing apparatus.

Claim 8 (Currently Amended): The mobile communication system as claimed in claim 6, wherein,

when a language in which user information stored beforehand in the mobile station is selected, the language information transmitting unit transmits language selection ~~select~~ information corresponding to the selected language to the service providing apparatus.

Claim 9 (Currently Amended): The mobile communication system as claimed in claim 6, wherein

the language information transmitting unit transmits language selection ~~select~~ information stored in advance to the service providing apparatus.

Claim 10 (Currently Amended): The mobile communication system as claimed in claim 6, wherein

the service providing system further comprises a transmission determining unit for determining whether the information in the language corresponding to the language selection ~~select~~ information is transmittable, and

the information transmitting unit transmits the information in the language corresponding to the language selection ~~select~~ information to the mobile station, when the information is determined to be transmittable by the transmission determining unit.

Claim 11 (Currently Amended): A mobile station that can receive services supplied from a service providing apparatus, comprising:

a control unit for adding, to a transmission request signal, language selection information for selecting a language in which information is to be received; and

~~a language select receiving unit for receiving language selection selected by a user;~~
and

a language information transmission unit for transmitting a the language selection ~~select~~ information corresponding to the language selected by the user, together with a the transmission request signal each time whenever starting communication.

Claim 12 (Currently Amended): The mobile station as claimed in claim 11 further comprising:

a language storage unit for storing a plurality of language in which user information is made; and

a language information storage unit for storing the language selected by the user;
whereby transmitting a language selection ~~select~~ information corresponding to the language stored in the language information unit in advance.

Claim 13 (Currently Amended): A service providing apparatus supplying services to a mobile station, comprising:

a language information receiving unit for receiving language selection ~~select~~ information indicating a language in which information is to be received transmitted from the mobile station each time ~~whenever~~ the mobile station starts a communication session; and
an information transmitting unit for transmitting information in the language corresponding to the received language selection ~~select~~ information, to the mobile station.

Claim 14 (Currently Amended): The service providing apparatus as claimed in claim 13, further comprising:

a transmission determining unit for determining whether the information in the language corresponding to the language selection ~~select~~ information is transmittable;
whereby transmitting the information in the language corresponding to the language selection ~~select~~ information to the mobile station, when the information is determined to be transmittable by the transmission determining unit.
